

Current known issues CCE 3.0.3_01

Summary

As issues are discovered this article will be updated with issue description and workaround where one exists.

Applies To

Current version of CCE which is 3.0.3 update 01.

Symptoms

Component	Symptom	Comment
CCE Desktop - Rules Wizard	When using the Rules Wizard to edit an existing rule, the end result may be the new rule applied to the existing rule and the rule will not work. This problem affects only some configurations, updates and actions.	The only work around at this stage is to edit the rule directly in Configuration Manager or in the console for CCE Desktop.
CCE Control Panel - RSS Feeder	The RSS Feed no longer works with CCE Control Panel as a result of the upgrade to this version to our website.	http://support.avayacce.com and select the RSS feed you would like to have displayed in CCE Control Panel, for example "Latest Known Issues", by selecting the desired RRS button and copy the URL from the browser, for example http://support.avayacce.com/LatestRss.aspx?TabID=5 In CCE Control Panel, go to the menu Tools Options and select the Latest Support News tab and paste in the URL. Click Apply and OK.
